

## What kind of temporary is available?

Essix with a Tooth

An Essix is a shield that clips in over all teeth. The shield is slightly visible (like clear aligners)

Flipper

A Flipper is placed only for the missing tooth.

An Essix covers your teeth.

A flipper covers your palate.

An Essix clicks in place using the retention of multiple teeth.

A flipper clicks in place against the inside edges of your teeth; not as firmly as an Essix
